                                                                                                                                                                                                                                                                                                                                                          The present sequence is an alternative version of rat Nogo B protein
which is a potent neural cell growth inhibitor and is free of all central
cc which is a potent neural cell growth inhibitor and is free of all central
cc nervous system (CNS) myelin material with which it is natively
associated. The Nogo B transcript arises as a result of alternative
splicing of Nogo gene. Nogo proteins and fragments displaying neurite
cc growth inhibitory activity are used in the treatment of neoplastic
cdisease of the CNS e.g. glioma, pinealoma, medulloblastoma, acoustic
disease of the CNS e.g. glioma, pinealoma, neuroblastoma, acoustic
craniopharyngioma, pendyoma, pinealoma, haemangioblastoma, acoustic
cc neuroma, oligodendrogliona, menagioma, neuroblastoma, acoustic
cc craniopharyngioma, menagioma, neuroblastoma, acoustic
cc craniopharyngioma, menagioma, neuroblastoma,
and degenerative nerve diseases e.g. Alzheimer's and Parkinson's
cc or prevent hyperproliferative or benign dysproliferative disorders e.g.
cc protein and tissue hypertrophy. Nibozywes or antisense Nogo nucleic
cc cregeneration of neurons or to promote structural plasticity of the CNS in
cc disorders where neurite growth, respensation or maintenance are deficient
cc disorders where neurite growth, respensation or maintenance are deficient
cc disorders which can treat or prevent disorders or diseases of the CNS in
cc methods for predisposition to disorders and to screen for or test
cmolecules which can treat or prevent disorders or diseases of the CNS in
cc reaidues 1-172 fused to 975-1163 of Nogo A. This sequence is an
credibues 1-172 fused to 975-1163 of Nogo A. This sequence is an
catida (residues 976-1163) of Nogo A. SEQ ID numbers 35-42 are referred in
claim 32 and SEQ ID NO; 29 in discloure of the specification. However
cc the specification does not include sequences for these sEQ ID numbers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                              Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is a rat Nogo A protein which is a potent neural cell growth inhibitor and is free of all central nervous system (CNS) myelin material with which it is natively associated. The protein was derived from a cDNA generated by fusing NO18U37-3, H-3U21 cDNAs isolated from hexanucleotides-primed rat brain stem(spinal cord library, and Olils cDNA from an oligo d(T)-primed rat oligodendrocyte library.                     glioblastoma
the treatment of neoplastic disease of the CNS e.g. glions, glioblastic medulloblastoms, craniopharyngioma, ependyoma, pinealoma, haemangioblastoma, accustic neuroma, oligodendroglioma, menagioma, neuroblastoma or retinoblastoma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases. Therapoutics which promote Nogo activity can be used to treat or prevent hyperpoliferative or benign dysproliferative disorders e.g. psoriasis and tissue hypertrophy. Ribozymes or antisense Nogo nucleic acids can be used to inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         975 SVVDLLÝWRDIKKTGVVFGASLFLLLSLTVFSIVSVTÁÝIALALLSVTISFRIÝKGVIQA

The present sequence is an alternative version of rat Nogo A protein
which is a potent neural cell growth inhibitor and is free of all central
cc which is a potent neural cell growth inhibitors associated (CNS) myelin material with which it is natively
associated. Nogo proteins and fragments displaying neurite growth
inhibitory activity are used in the treatment of neoplastic disease of
the CNS e.g. glioma, paemangioblastoma, acoustic neuroma,
celudodendroglioma, menagioma, neuroblastoma or retinoblastoma and
coligodendroglioma, menagioma, neuroblastoma or retinoblastoma and
coligodendroglioma, menagiona, neuroblastoma or retinoblastoma and
coligodendroglioma, menagional or neurolatic neuroma,
coligodendroglioma, menagional production of seases e.g. Alzheimer's and Parkinson's diseases.
CC degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases.
CC Therapeutics which promote Nogo activity can be used to treat or prevent
CC neurons or to promote structural plasticity of the CNS in disorders where
cc neurite growth, regeneration or maintenance are deficient or desired. The
contract or prevent disorders and to screen for or test molecules which can prevent disorders and to screen for or test molecules which creat or prevent disorders and to screen for or test molecules which creat or prevent disorders and to screen for or test molecules which creat or prevent disorders and to screen for or test molecules which creat or prevent disorders or diseases of the Nogo A sequence shown in Fig.
C 2A (see AAX71310). SBO ID numbers 35-42 are referred in claim 32 and $EQ
C does not include sequences for these SBO ID numbers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     go proteins and nucleic acids useful for treating neoplastic disorders the central nervous system and inducing regeneration of neurons.
                                             'note= "C-terminal common region found in Nogo A, B and
"This region is not essential for inhibitory

                                                                                                                                    The invention relates to promoting nerve regeneration or conferring neuroportection, and preventing or inhibiting neuronal degeneration in the central/peripheral nervous system (NS). The method involves administering NS-specific activated T cells, NS-specific antigen or its analogue or its peptide, a nucleotide sequence the NS-specific antigen or its analogue or combinations. The method is useful for promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system from injury/disease, where the injury is spinal cord injury, blunt trauma, penetrating trauma, hemorrhagic stroke, ischaemic stroke or damages caused by surgery such as tumour excision. The disease is not an autoimmune disease or neoplasm. The disease results in a degenerative

The present invention describes a binding molecule which binds to human NogoA polypeptide, human NiG, human NiG-D20 or human NogoA 633-640 with a dissociation constant of less than 1000nM. Also described: (1) a polynucleotide encoding the binding molecule; (2) an expression vector or system comprising the polynucleotide; (3) a host cell comprising the binding molecule and a carrier or composition comprising the binding molecule and a carrier or diluent; and (5) treating diseases associated with nerve repair. The binding molecule has neuroprotective activity, and can be used in gene therapy. The binding molecule is useful in preparing a composition for treating central nervous system (CNS) injury or neurodegenerative disorders. The present sequence represents rat NogoA, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             1095 LMWVFTYVGALFNGLTLLILALISLFSIPVIYERHQVQIDHYLGLANKSVKDAMAKIQAK 1154

                                                The present invention relates to an isolated truncated Nogo-A polypeptide that corresponds to a truncated form of the Nogo-A protein from the rat and from the human. The truncated polypeptide is useful for identifying a compound having detectable affinity to a Nogo-A protein. The present sequence is a Nogo-A polypeptide of the invention.
                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                180

The interior fractice to a invert response to streptozocin-induced diabetes, or comprising, hybridising or having at least 80% sequence identity to a sequence whose expression products are kinases, phosphatases, ion channel proteins, receptors, transporters, G-protein coupled receptor proteins, DNA-binding proteins, proteases or enzymes, given in the specification. A gene of the invention has analgesic activity, and may have a use in gene therapy. The gene sequences, vector, host cell, animal, polypeptide and antibody are useful for screening of compounds for diagnosing or treating pain. The kits are useful for sequential detecting and/or quantifying downequalition of a gene sequence in the spinal cord of a mammal in response to streptozocin-induced diabetes. The compound or pharmaccutical composition is useful as a medicament for treating or diagnosing pain.

The present sequence represents a protein encoded by a gene of the

The invention relates to promoting nerve regeneration or conferring neuroprotection and preventing or inhibiting neuronal degeneration in the central/peripheral nervous system (NS). The method involves administering NS-specific antigen, its analogue or its peptide, a nucleotide sequence the NS-specific antigen or its analogue or combinations. The method is useful for promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system (Trauma, penetrating trauma, hemorrhagic stroke, ischemenic stroke or damages caused by surgery such as tumour excision. The disease is not autoimmune disease or neoplasm. The disease results in a degenerative contourning in either gray or white matter or both. The disease is disease, facial nerve (Ball's) palsy, glaucoma, Huntington's chorea, campotrophic lateral sclerosis, non-arteritic optic neuropathy, and cultamin deficiency, intervertebral diseases. Parkinson's cultamin deficiency, intervertebral diseases, including but not limited the neuropathies associated with various diseases, including but not innervented with various diseases, including but not limited the neuropathies associated with various diseases, including but not innervented with various diseases, including but not limited the neuropathies associated with various diseases, including but not limited the neuropathies associated with various diseases, including but not innervented with various diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    to uremia, porphyria, hypoglycemia, Sjorgren Larsson syndrome, acute sensory neuropathy, chronic ataxic neuropathy, biliary cirrhosis, primary amyloidosis, obstructive lung diseases, acromegaly, malabsorption syndromes, polycythemia vera, immunoglobulin [Ig]A- and IgG gammapathies, complications of various drugs (e.g., metronidazole) and toxins (e.g., alcohol or organophosphates), Charcot-Marie-Tooth disease, ataxia atengectasia, Friedreich's atexia, amyloid polyneuropathies, adrenomyeloneuropathy, Giant axonal neuropathy, Refsum's disease, Fabry's disease, or lipoproteinemia. The present sequence represents the rat neurotransmitter receptor protein Nogo-C, an example of NS-specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is a rat Nogo B protein which is a potent neural cell growth inhibitor and is free of all central nervous system (CNS) myelin material with which it is natively associated. The Nogo B transcript arises as a result of alternative splicing of Nogo gene. Nogo protesns and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, glioblastoma, medulloblastoma, craniopharyngioma, ependyoma, pinealoma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             treating neoplastic disorders regeneration of neurons.

dysproliferative disorders e.g. psoriasis and tissue hypertrophy.

Ribozymes or antisense Nogo mucleic acids can be used to inhibit production of Nogo protein to induce regeneration of neurons or to promote structural plasticity of the CNS in disorders where neurite growth, regeneration or maintenance are deficient or desired. The animal models can be used in diagnostic and screening methods for predisposition to disorders and to screen for or test molecules which can treat or prevent disorders or diseases of the CNS. Note: The present sequence is not given in the specification but is derived from Nogo A protein sequence (AAY71310) and corresponds to residues 1-172 fused to 976-1163 of Nogo A. The specification claims an alternative version of this sequence (see AAY71385) which corresponds to residues 1-172 fused to 975-1163 of Nogo A. SEQ ID numbers 35-42 are referred in claim 32 and SEQ ID NO: 29 in disclosure of the specification. However the specification does
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                292
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nerve regeneration, neuroprotection, neuronal degeneration; CNS; PNS; central nervous system; peripheral nervous system; tranquillizer; Nogo; vulnerary; cerebroprotective; anti-tumour; antidiabetic; anticonvulsant; nociropic; antiparkinsonian; ophthalmological; analgesic; hepatotropic; osteopathic; vasotropic; nephrotropic; cytostatic; antigen; gene therapy;

The invention relates to promoting nerve regeneration or conferring neuroprotection and preventing or inhibiting neuronal degeneration in the central/peripheral nervous system (NS). The method involves administering NS-specific activated T cells, NS-specific antigen, its analogue or its peptide, a nucleotide sequence the NS-specific antigen or its analogue or combinations. The method is useful for promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system from injury/disease, where the injury is spinal cord injury, blunt trauma, penetrating trauma, hemorrhagic stroke, ischaemic stroke or damages caused by surgery such as tumour excision. The disease is not autoimmune disease or neoplasm. The disease results in a degenerative process occurring in either gray or white matter or both. The disease is disease, facial neither gray or white matter or both. The disease is disease, facial nerve (Bell's) palsy, glaucoma, Huntington's chorea, amyotrophic lateral selecosis, non-arteritic optic neuropathy, and call call call call call call call disc hernialation, prion disease such as Creutzfeldt-Jakob disease, carpal tunnel syndrome, peripheral concurred with various diseases, including but not limited neuropathies associated with various diseases, including but not limited
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pathies, complications of various drugs (e.g., metronidazole) and toxins (e.g., alcohol or organophosphates), Charcot-Marie-Tooth disease, ataxia telangectasia, Friedreich's ataxia, amyloid polyneuropathies, addrenomyeloneuropathy, Giant axonal neuropathy, Refeum's disease, Fabry's

growth, regeneration or maintenance are deficient or desired. The animal models can be used in diagnostic and screening methods for predisposition to disorders and to screen for or test molecules which can treat or prevent disorders or diseases of the CNS. Note: SEQ ID numbers 35-42 are referred in claim 32 and SEQ ID NO: 29 in disclosure of the specification. However the specification does not include sequences for
                                                                                                                                                                                                                                                                                                                                                                                                                       go proteins and nucleic acids useful for treating neoplastic disorders the central nervous system and inducing regeneration of neurons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is a rat Nogo C protein which is a potent neural cell growth inhibitor and is free of all central nervous system (CNS) myelin material with which it is natively associated. Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, glioblastoma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          medulloblastoma, craniopharyngioma, ependyoma, pinealoma, haemangioblastoma, acoustic neuroma, oligodendroglioma, menacioma, neuroblastoma or retinoblastoma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases. Therapeutics which promote Nogo activity can be used to treat or prevent hyperproliferative or benign dysproliferative disorders e.g. psoriasis and tissue hypertrophy. Ribozymes or antisense Nogo nucleic acids can be used to inhibit production of Nogo protein to induce regeneration of neurons or to promote structural plasticity of the CNS in disorders where neurite

RESULT 12 AAY71559

The patent relates to neurite growth inhibitor Nogo which is free of all central nervous system (CNS) myelin material with which it is natively central nervous system (CNS) myelin material with which it is natively central netwous associated. Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the inhibitory activity are used in the treatment of neoplastic disease of the construction, heammagiona, neuroblastoma, acoustic neuroma, coligodendrogliona, menagiona, neuroblastoma or retinoblastoma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases.

CC Therappeutics which promote Nogo activity can be used to treat or prevent the propertion or benign dysproliferative disorders e.g. psoriasis and tissue hypertrophy. Ribozymes or antisense Nogo nucleic acids can be used to inhibit production of Nogo protein to induce regeneration of for neurons or to promote structural plasticity of the CNS in disorders where neurite growth, regeneration or maintenance are deficient or desired. The animal models can be used in diagnostic and screening methods for creat or prevent disorders and to screen for or test molecules which can treat or prevent disorders and to screen for or test molecules which creat or prevent disorders or diseases of the CNS. The present sequence is derived by fusing two fragments from rat Nogo C and Nogo A proteins. The fragment is used in the construction of mutant Nogo-C which is composed of His-tag/77-tag/Nogo-C N-terminal (11 aa) + Nogo-A which is composed of His-tag/77-tag/Nogo-C N-terminal (11 aa) + Nogo-A which is dedition, N-terminal region 1-12-174, particularly amino acids 542-722. In distribution, N-terminal region 1-171 was found to be inhibitory to NHH 1313 the specification but is derived from a Rogo C sequence is not given in the specification but is derived from a Nogo C sequence shown in AAY71312 and Nogo C was dequence shown in the region 1-171 was found to be inhibitory effectived by the present Rat, neurite growth inhibitor; Nogo A; Nogo C; neural cell; myelin; CNS; central nervous system; neoplastic disease; antiproliferative; glioma; antisense gene therapy; neuroblastoma; menagioma; retinoblastoma; degenerative nerve disease; Alzheimer's disease; Parkinson's disease; Apperpoliferative disorder; benign dysproliferative disorder; benign dysproliferative disorder; benign dysproliferative disorder; diagnosis; psoriasis; tissue hypertrophy; neuronal regeneration; treatment; structural plasticity; screening; mutant; mutent: go proteins and nucleic acids useful for treating neoplastic disorders the central nervous system and inducing regeneration of neurons. Rat Nogo C/Nogo A proteins derived fragment to construct mutant Nogo-C. ď, /note= "Corresponds to residues 975-1162 of rat Nogo protein shown in AAY71310" 1. .11 Note= "Corresponds to residues 40-50 of rat Nogo protein shown in AAY71312" Location/Qualifiers Example; Page; 122pp; English. 99WO-US026160 98US-0107446P. .199 (SCHW/) SCHWAB M E.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
The patent relates to neurite growth inhibitor Nogo which is free of all central nervous system (CNS) myelin material with which it is natively associated. Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            232 IQKSDEGHPFRAYLESEVAISEELVQKYSNSALGHVNSTIKELRRLFLVDDLVDSLKFAV

The patent relates to neurite growth inhibitor Nogo which is free of all central nervous system (CNS) myelin material with which it is natively central nervous system (CNS) myelin material with which it is natively central nervous system (CNS) myelin material with which it is natively cassociated Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the constitution, menagioma, neonoplastoma, acoustic neuroma, cligodendroglioma, menagioma, neuroblastoma or retinoblastoma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases.

CC Therapeutics which promote Nogo activity can be used to treat or prevent hyperprophy. Albozymes or antisense Nogo nucleic acids can be used to inhibit production of Nogo protein to induce regeneration of neurons or to promote structural plasticity of the CNS in disorders where constite growth, regeneration or maintenance are deficient or desired. The neurite growth, regeneration or maintenance are deficient or desired. The animal models can be used in diagnostic and screening methods for prevent disorders or diseases of the CNS. The present sequence is a fragment of rat Nogo A protein shown in AAY71310, which is used in the nogo A sequence from main acids 172974, particularly cannocatine in the Nogo A sequence from main acids 172974, particularly amino acids 542-722. In addition, N-terminal region 1-171 was found to be inhibitory to NIH 373 fibroblast spreading. Note: The present sequence is not given in the specification but is derived from rat Nogo A sequence from animo acids 12974, particularly canno acids not given in the specification but is derived from rat Nogo A sequence from protein canno cannocated from a Nogo A sequence from the present sequence shown in AAY71310. SEQ ID numbers 35-42 are referred in claim 32 and 580 con to include sequences for these SEQ ID numbers include sequences for these SEQ ID numbers of the sequence from sequence and sequence from the present sequence cannocate 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      go proteins and nucleic acids useful for treating neoplastic disorders the central nervous system and inducing regeneration of neurons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              99.4%; Score 919; DB 3; Length 403;

```
the pattent relates to neutrice growth intinity. Any which it is natively associated. Nogo proteins and fragments displaying neurite growth associated. Nogo proteins and fragments displaying neurite growth associated. Nogo proteins and fragments displaying neurite growth associated. Nogo proteins and fragments displastic disease of the CNS e.g. glioma, glioma, medulloblastoma, craniopharyngioma, ependyoma, pinealoma, haemangioblastoma, acoustic neuroma, coligodendroglioma, menagioma, medulloblastoma, craniopharyngioma, ependyoma, pinealoma, neuroblastoma or retinoblastoma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases.

CC chigodendroglioma, menagioma, neuroblastoma or retinoblastoma and degenerative nor benign dysproliferative disorders e.g. psoriasis can disposition of Nogo protein to induce regeneration of used to inhibit production of Nogo protein to induce regeneration of neurons or to promote structural plasticity of the CNS in disorders where continue to disorders and to screen for or test molecules which can treat or prevent disorders or diseases of the CNS. The present sequence for used in the construction of mutant Nogo-A scomposed of Hissocrafers and to screen for or test molecules which is a truncated form of rat Nogo A protein shown in AAY1310, which is cused in the construction of mutant Nogo-A is composed of Hissocrafers and to screen for or test molecules which cused for mapping the inhibitory sites of Nogo protein. Major inhibitory cregion at a 1-1162. Nogo A deletion mutants were used for mapping the inhibitory to NIH 373 fibroblast spreading. Note: The was found to be inhibitory to NIH 373 fibroblast spreading. Note: The was found to be inhibitory to NIH 373 fibroblast spreading. Note: The was found to be inhibitory sieps of the Specification in ABAY1110. SEO ID numbers 35-42 are referred in claim 32 and SEO ID NO: 29 in disclosure of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nogo proteins and nucleic acids useful for treating neoplastic disorders of the central nervous system and inducing regeneration of neurons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 patent relates to neurite growth inhibitor Nogo which is free of all
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example; Page; 122pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 6998, Application US/09949016

Sequence 6998, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

TITLE OF INVENTION: FOLYMOREPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: POLYMOREPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: POLYMOREPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CLOOL307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT PILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/231,768

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FeatSEQ for Windows Version 4.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 45132, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Mucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT FILLING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 45132
LENGTH: 219
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FTYVGALFNGLTLLILALISLFSIPVIYERHQVQIDHYLGLANKSVKDAMAKIQAKIP 182
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             26 LIYWRDVKKSGIVFGAGLITLAAISSFSVISVFAYLSLLTLFGTVAFRIYKSVTQAVQKT
